

# The Prometheus Engine System

A Clean Alternative to the Internal Combustion Engine

## Farmer-Produced Bio-Fuel

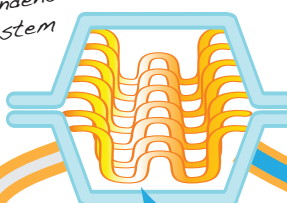

Farmers grow the crop and make the bio-fuel (ethanol) right on their own land. They sell it to the local market.

*Fuel cost could be as low as \$2.00 per Gallon!*

**Renewable Fuel  
Made by  
Local Farmers**

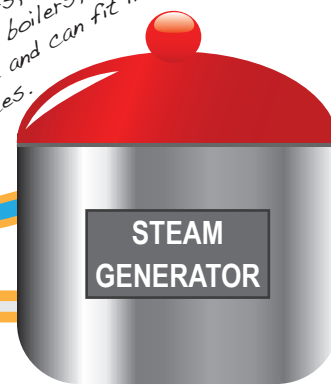

**We Use Corn Instead of Oil for Fuel**

Condenser System

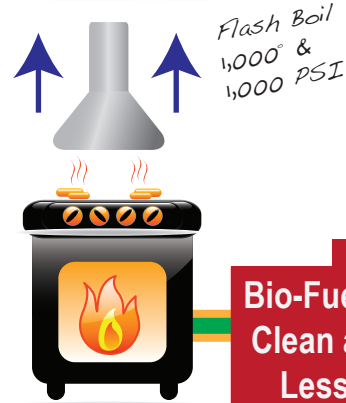

**Steam is Condensed Back into Water & Used Again & Again & Again**

*Steam Generators, as opposed to boilers, are very safe and can fit in small spaces.*

*We could power fleets of cars, trucks, buses & airplanes!*

**Quiet Operation**  
**High Torque at Low RPMs • Modular Design**  
**Prometheus Engine Benefits**  
**Low Maintenance • No Stinky Exhaust**  
**Bio-Fuel Powered**

*Flash Boil 1,000° & 1,000 PSI*

**Bio-Fuel Burns Clean and For Less Cost**

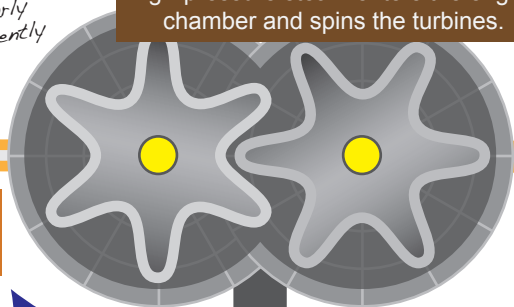

**Instead of creating MINI-EXPLOSIONS in a combustion chamber thousands of times per minute, we just boil some water.**

**The Throttle**

*Controls the Steam Flow*

**Involute Turbine Engine**  
 High-pressure steam enters the engine chamber and spins the turbines.

*This Type of Engine Runs Nearly Silently*

**STEAM IN**

**STEAM OUT**

*WE CAN CHANGE THINGS FOR THE BETTER !!!*

## Prometheus Engine Can Drive Our World

The power of Steam and Bio-Fuel can drive all of the vehicles in our daily lives. Existing systems can be converted to gain huge savings in lower fuel costs and less maintenance.

**Clean, Safe and Quiet! Steam!**

*Prometheus is based on the popular Rankine Cycle Steam Engine Design.*

*Engine Power Out -->*
